

GREENSPAN

Turf-Type Tall Fescue

“Rich green color, finer leaf texture and great density makes Greenspan ideal for both homeowners and lawn professionals.”

Improved Genetics

Greenspan is a new release for 2021. It is the result of a breeding selection from a range of top performing tall fescues, capitalizing on numerous variety strengths, including turf density, rich green color, finer leaf texture, and disease resistance.

Regional Adaptation

Greenspan should perform very well in most regions adapted to tall fescue. Early data shows excellent performance in temperate climates with minimal summer heat and humidity.

While Greenspan has exhibited some resistance to brown patch, it is best used in conjunction with other more resistant cultivars in areas susceptible to extensive brown patch.

For Both Professionals and Homeowners

Both turfgrass professionals and homeowners will find Greenspan a great choice for turf lawns, athletic fields, and common areas where attractive turf is desired.

Greenspan is also an ideal grass to use for improving existing lawns. Overseeding with Greenspan can increase overall turf quality and disease resistance.

PLANTING INSTRUCTIONS

For ideal turf, plant Greenspan on fertile, neutral pH soils during the cooler seasons of the year, such as spring and fall. If needing to plant during other times, plan on additional overseeding.

For a thick, lush turf, seed at these rates:

Seeding Rate in lbs./1000 sq. ft.

New Lawns: 7-10

Existing Lawns: 4-6
